

AI Response Evaluation Project

Project Overview

This portfolio demonstrates a structured AI Response Evaluation project designed to simulate the workflow commonly performed by AI Data Annotators and AI Data Specialists.

The project focuses on evaluating AI-generated responses using predefined quality criteria. The objective is to develop practical skills in response assessment, comparative analysis, and structured data evaluation while building a portfolio relevant to AI data annotation roles.

Project Objectives

- Practice evaluating AI-generated responses using standardized criteria.
- Compare outputs generated by multiple Large Language Models (LLMs).
- Develop consistent scoring and analytical reasoning skills.
- Gain hands-on experience with AI response quality assessment.
- Build a portfolio demonstrating practical AI evaluation capabilities.

Project Scope

- **Total Prompts:** 20
- **AI Models Evaluated:** 3
 - ChatGPT
 - Google Gemini
 - Microsoft Copilot
- **Total Responses Evaluated:** 60
- **Evaluation Criteria:** 5
- **Language:** English

Evaluation Criteria

Each response was evaluated using the following criteria on a scale of **1 (Poor) to 5 (Excellent)**.

Criterion	Description
Relevance	Measures how well the response answers the given prompt.
Clarity	Evaluates readability, organization, and ease of understanding.
Completeness	Assesses whether the response provides sufficient and comprehensive information.
Factual Accuracy	Determines whether the information is factually correct and free from misleading statements.
Grammar & Language	Reviews grammar, spelling, fluency, and overall language quality.

Project Workflow

1. Prepare a collection of prompts across multiple domains.
2. Submit each prompt to three AI models.
3. Record every response in a structured spreadsheet.
4. Evaluate each response using predefined scoring criteria.
5. Document evaluation notes and justification for every score.
6. Calculate average scores.
7. Compare model performance.
8. Summarize findings and conclusions.

Tools Used

- ChatGPT (Free)
- Google Gemini (Free)
- Microsoft Copilot (Free)
- Microsoft Excel / Google Sheets
- Microsoft Word

Portfolio Contents

File	Description
01_Prompt_Dataset.xlsx	Collection of evaluation prompts
02_AI_Responses.docx	AI-generated responses from three different models
03_Evaluation_Sheet.xlsx	Evaluation scores, comments, and average results
04_Final_Report.pdf	Complete project report including methodology, findings, and conclusions
Evidence	Sample screenshots of AI-generated responses used during the evaluation process

Key Skills Demonstrated

- AI Response Evaluation
- Comparative Analysis
- Data Annotation Fundamentals
- Data Quality Assessment
- Structured Evaluation
- Critical Thinking
- Attention to Detail
- Spreadsheet Organization
- Documentation
- Analytical Reporting

Learning Outcomes

Through this project, I gained practical experience in:

- Evaluating AI-generated content using objective criteria.
- Comparing responses from different AI systems.
- Applying consistent scoring methodologies.
- Organizing evaluation data in structured formats.
- Producing clear analytical reports based on evaluation results.

This project represents a self-directed learning initiative created to strengthen practical skills relevant to AI Data Annotation, AI Response Evaluation, and AI Data Specialist roles.
