Large Language Models generate responses to user prompts. To improve the quality and reliability of AI systems, human evaluators assess AI-generated outputs based on predefined evaluation criteria such as relevance, clarity, completeness, factual accuracy, and language quality.

The purpose of this project was to evaluate and compare AI-generated responses from different large language models using structured evaluation criteria.

Objective

ODY ANGGORO
AI DATA SPECIALIST

- **Learn AI response evaluation workflow.**
- **Compare outputs from different AI models.**
- **Practice structured scoring.**
- **Build practical experience for AI Data Annotation roles.**
- **Tools used : ChatGPT, Google Gemini, Microsoft Copilot, Ms Excel & Word**

- Prepared 20 prompts.
- Collected responses from ChatGPT, Gemini, and Copilot.
- Recorded responses in structured spreadsheets.
- Evaluated each response - each criteria was scored on a scale from 1 - 5
- Calculated average scores.
- Compared model performance.

Evaluation Criteria

ODY ANGGORO
AI DATA SPECIALIST

Criteria	Description
Relevance	Does the response answer the question?
Clarity	Is the explanation easy to understand?
Completeness	Does it cover important information?
Factual Accuracy	Is the information factually correct?
Grammar & Language	Is the language fluent and error-free?

Results

ODY ANGGORO
AI DATA SPECIALIST

The table below shows the average scores based on the evaluation criteria :

AI	Relevance	Clarity	Completeness	Factual Accuracy	Grammar & Language	Result Average
ChatGPT	5	5	5	5	5	5
Gemini	5	4,85	5	5	5	4,97
Copilot	5	4,95	4,65	4,95	5	4,91

Results

Findings

ODY ANGGORO
AI DATA SPECIALIST

- **ChatGPT produced the most comprehensive answers.**
- **Gemini generally generated concise and accurate responses.**
- **Copilot provided useful answers but occasionally omitted supporting details.**

Conclusion

ODY ANGGORO
AI DATA SPECIALIST

- **Successfully evaluated 60 AI-generated responses.**
- **Evaluation criteria are applied consistently .**
- **Practiced comparative analysis and structured scoring.**
- **Gained practical experience in AI response evaluation workflows.**

Item	Value
Total Prompts	20
AI models evaluated	3
Responses evaluated	60
Evaluation criteria	5
Average evaluation time per response	±8 minutes
Total evaluation time	±8 hours
